Meet Samuel

My name is Samuel Aikulola. I am a Registered Nurse in the Emergency Department (ED) at Humber River Health (Humber).

What skills or experiences have you gained at Humber that have helped you grow in your career?

The skills and the experiences that I have gained at Humber over the years are numerous to mention. Specifically, you learn new things every day from our patients and the community we serve in North West Toronto. Our community is diverse with unique and multicultural and racial backgrounds. There are many in-service training and skills days involved both in the ED and all over the hospital that support the staff all the time.

How do you feel you contribute to Humber's overall vision of Lighting New Ways in Healthcare?

Our organization has been able to weave and synergize our values, namely, compassion, professionalism and respect, with our mission and our vision to provide the best care possible for our patients, our community and everyone that accesses our services. Our organization provides ongoing training, support, and encouragements to front line staff, like myself, to provide high quality, comprehensive care to the community while being sensitive to inclusion, diversity and equity. Patients and their families are empowered throughout the phases of their care in our organization.

What has inspired you most while working at Humber?

We continue to improve the care we give to our patients on a daily basis, relying on the latest research and innovative processes.

What advice would you give to someone who is just starting in a role at Humber?

I would encourage them to be comfortable in their new role and realize that everyone in the organization is rooting for their success. Be comfortable in asking questions and know there are so many services in place to support, collaborate, and ensure your success. Do not struggle unnecessarily - ask for support from your supervisors, managers, etc. There are so many committees within the organization to support the staff members.
